Conserving water saves energy. Your home needs energy to filter, heat, and pump water, so conserving water also lowers your carbon impact. Utilizing less water helps keep more in our ecosystems and maintains the habitats of fish, herons, water voles, and otters in wetlands. The NSS unit of VLITS organized an awareness program on "Save energy and save water" Program at ZPH School, Vadlamudi on 22.03.2022. NSS students explained the importance of saving water during winter time and also distributed the handouts to the students.
