DESIGN OF MACHINE MEMBERS – I

Course Objectives:

- 1. The student shall gain appreciation and understanding of the design function in mechanical engineering, the steps involved in designing and the relation of design activity with manufacturing activity
- 2. Selection of proper materials to different machine elements based on their physical and mechanical properties.
- 3. Learn and understanding of the different types of failure modes and criteria.
- 4. Procedure for the different machine elements such as fasteners, shafts, couplings, keys, axially loaded joints etc.

UNIT – I

INTRODUCTION: General considerations in the design of Engineering Materials and their properties – selection –Manufacturing consideration in design, tolerances and fits –BIS codes of steels.

STRESSES IN MACHINE MEMBERS: Simple stresses – combined stresses – torsional and bending stresses – impact stresses – stress strain relation – various theories of failure – factor of safety – design for strength and rigidity – preferred numbers. the concept of stiffness in tension, bending, torsion and combined situations – static strength design based on fracture toughness.

UNIT – II

STRENGTH OF MACHINE ELEMENTS: Stress concentration – theoretical stress concentration factor – fatigue stress concentration factor notch sensitivity – design for fluctuating stresses – endurance limit – estimation of endurance strength – Goodman's line – Soderberg's line – modified Goodman's line.

UNIT – III

Riveted and welded joints – design of joints with initial stresses – eccentric loading.

Bolted joints – design of bolts with pre-stresses – design of joints under eccentric loading – locking devices – both of uniform strength, different seals.

UNIT – IV

KEYS, COTTERS AND KNUCKLE JOINTS: Design of keys-stresses in keys-cotter joints-spigot and socket, sleeve and cotter, jib and cotter joints- knuckle joints.

SHAFTS: Design of solid and hollow shafts for strength and rigidity – design of shafts for combined bending and axial loads – shaft sizes – BIS code. Use of internal and external circlips, gaskets and seals (stationary & rotary).

UNIT – V

SHAFT COUPLING: Rigid couplings – muff, split muff and flange couplings, flexible couplings – flange coupling (modified).

UNIT – VI

MECHANICAL SPRINGS:

Stresses and deflections of helical springs – extension -compression springs – springs for fatigue loading, energy storage capacity – helical torsion springs – co-axial springs, leaf springs.

Note: Design data book is NOT Permitted for examination

Text Books:

- 1. Machine Design/V.Bandari/ TMH Publishers
- 2. Machine design / NC Pandya & CS Shah/Charotar Publishing House Pvt. Limited
- 3. Design data book of Engineers-

References:

- 1. Design of Machine Elements / V.M. Faires/McMillan
- 2. Machine design / Schaum Series/McGrawHill Professional
- 3. Machine Design/ Shigley, J.E/McGraw Hill.
- 4. Design data handbook/ K.Mahadevan & K. Balaveera Reddy/ CBS publishers.
- 5. Design of machine elements-Spotts/Pearson Publications
- 6. Machine Design –Norton/ Pearson publishers

Course outcomes:

Upon successful completion of this course student should be able to:

- 1. Apply the design procedure to engineering problems, including the consideration of technical and manufacturing constraints.
- 2. Select suitable materials and significance of tolerances and fits in critical design applications.
- 3. Utilize design data hand book and design the elements for strength, stiffness and fatigue.
- 4. Identify the loads, the machine members subjected and calculate static and dynamic stresses to ensure safe design.
