I Year - II Semester		3	0	0	3			
ENGINEERING CHEMISTRY								

Knowledge of basic concepts of Chemistry for Engineering students will help them asprofessionalengineers later in design and material selection, as well as utilizing the available resources.

COURSE OBJECTIVES

interpret

<i>Importance</i> of usage of plastics in household appliances and composites (FRP) in aerospace and automotive industries.				
Outline the basics for the construction of electrochemical cells, batteries and fuel				
cells.Understand the mechanism of corrosion and how it can be prevented.				
<i>Express</i> the increases in demand as wide variety of advanced materials are introduced; whichhave excellent engineering properties.				
Classify and discuss the materials used in major industries like steel industry, metallurgical				
industries and construction industries and electrical equipment manufacturing industries.				
Lubrication is also <i>summarized</i> .				
Relate the need of fuels as a source of energy to any industry, particularly industries like				
thermal power stations, steel industry, fertilizer industry etc., and hence introduced.				
Explain the importance and usage of water as basic material in almost all the industries				

drawbacks of steam boilers and also how portable water is supplied for drinking purposes.

UNIT I: POLYMER TECHNOLOGY

8 hrs

Polymerisation:- Introduction, methods of polymerization (emulsion and suspension), mechanical properties.

Plastics: Compounding, fabrication (compression, injection, blown film and extrusion), preparation, properties and applications (PVC, polycarbonates and Bakelite), mention some examples of plasticmaterials used in electronic gadgets, recycling of e-plastic waste (waste to wealth).

Elastomers:- Introduction, preparation, properties and applications (Buna S, thiokol and polyurethanes). *Composite materials:* Fiber reinforced plastics, conducting polymers, biodegradable polymers, biomedical polymers.

Course Outcomes: At the end of this unit, the students will be able to

Analyze the different types of composite plastic materials and interpret themechanism of conduction in conducting polymers.

UNIT II: ELECTROCHEMICAL CELLS AND CORROSION

10 hrs

Single electrode potential, electrochemical series and uses of series, standard hydrogen electrode, calomelelectrode, construction of glass electrode, batteries (Dry cell, Li ion battery and zinc air cells), fuel cells (H_2 - O_2 , CH_3OH - O_2 , phosphoric acid and molten carbonate). *Corrosion:*-Definition, theories of corrosion (chemical and electrochemical), galvanic corrosion, differential aeration corrosion, stress corrosion, galvanic series, factors

influencing rate of corrosion, corrosion control (proper designing and cathodic protection), Protective coatings (surface preparation, cathodic coatings, anodic coatings, electroplating and electroless plating [nickel]), Paints (constituents, functions and special paints).

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY KAKINADA KAKINADA – 533 003, Andhra Pradesh, India DEPARTMENT OF MECHANICAL ENGINEERING

Course Outcomes: At the end of this unit, the students will be able to

Utilize the theory of construction of electrodes, batteries and fuel cells in redesigning new
engineering products and categorize the reasons for corrosion and study methods to control
corrosion.

UNIT III: CHEMISTRY OF MATERIALS Part- A:

10 hrs

Part- A:

Nano materials:- Introduction, sol-gel method, characterization by (Brunauer Emmet Teller [BET]), (scanning electron microscopy [SEM]) and (transmission electron microscopy [TEM]) with example (TiO₂), applications of graphene and fullerenes, carbonnanotubes (types, preparation and applications) *Thermal analysis techniques*: Instrumentation and applications of thermogravimetric analysis (TGA), differential thermal analysis (DTA), differential scanning calorimetry (DSC).

Part-B:

Refractories: - Definition, classification, properties (refractoriness, refractoriness under load, porosityand thermal spalling), failure of refractories.

Lubricants: - Definition, mechanism of lubricants, properties (definition and importance). **Cement:** - Constituents, manufacturing, parameters to characterize the clinker formation: lime saturation factor (LSF), silica ratio (SR) and alumina ratio (AR), chemistry of setting and hardening, deterioration of cement.

Course Outcomes: At the end of this unit, the students will be able to

- □ Synthesize nanomaterials for modern advances of engineering technology.
 □ Summarize the techniques that detect and measure changes of state of reaction.
- ☐ *Illustrate* the commonly used industrial materials.

UNIT IV: FUELS 10 hrs

Introduction, calorific value, higher calorific value, lower calorific values, problems using Dulong's formula, proximate and ultimate analysis of coal sample and their significance, numerical problems, petroleum (refining-cracking), synthetic petrol (Fischer Tropsch and Bergius), petrol knocking, diesel knocking, octane and cetane ratings, anti-knocking agents, Introduction to alternative fuels (Bio-diesel,ethanol, methanol, natural gas, liquefied petroleum gas, compressed natural gas), Flue gas analysis by Orsat apparatus, rocket fuels.

Course Outcomes: At the end of this unit, the students will be able to

	Differentiate petroleum,	petrol, synthetic petrol and have	knowledge how they are produced
П	Study alternate fuels and	a nalyse flue gases	

UNIT V: WATER TECHNOLOGY

8 hrs

Hardness of water, determination of hardness by complexometric method, boiler troubles (priming and foaming, scale formation, boiler corrosion, caustic embrittlement), internal treatments, softening of hard water (zeolite process and related sums, ion exchange process), treatment of industrial waste water, potable water and its specifications, steps involved in purification of water, chlorination, break point chlorination-desalination (reverse osmosis and electro dialysis).

Course Outcomes: At the end of this unit, the students will be able to

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY KAKINADA KAKINADA – 533 003, Andhra Pradesh, India DEPARTMENT OF MECHANICAL ENGINEERING

☐ *Analyze* the suitable methods for purification and treatment of hard water and brackish water.

JAWAHARLAL NEHRU TECHNOLOGICAL UNIVERSITY KAKINADA KAKINADA – 533 003, Andhra Pradesh, India DEPARTMENT OF MECHANICAL ENGINEERING

Standard Books:

- 1. P.C. Jain and M. Jain "**Engineering Chemistry**", 15/e, Dhanpat Rai & Sons, Delhi,(Latest edition).
- 2. Shikha Agarwal, "Engineering Chemistry", Cambridge University Press, New Delhi, (2019).
- 3. S.S. Dara, "A Textbook of Engineering Chemistry", S.Chand & Co, (2010).
- 4. Shashi Chawla, "Engineering Chemistry", Dhanpat Rai Publicating Co. (Latest edition).

Reference:
